

Caspase Inhibitors and the Use Thereof

Abstract of the Disclosure

5

The present invention is directed to novel dipeptide thereof, represented by the general Formula I:

10

where R₁-R₃, X and Y are defined herein. The present invention also relates to the discovery that compounds having Formula I are potent inhibitors of caspases and apoptotic cell death. Therefore, the inhibitors of this invention can retard or block cell death in a variety of clinical conditions in which the
